Answer 4-5 quick
questions to build
your perfect system

Which filter pack is right for you?

Cloudtap®'s interchangeable filter range is designed for maximum flexibility, giving homeowners the freedom to swap cartridges whenever they want. However, there's a fine line between having options and being buried in an avalanche of identical plastic cylinders, so we've pre-grouped filters into packs that address the needs of different homes and lifestyles.

FP000 / FP001

Mains Fundamental / Carbon Pack

5-micron poly spun sediment, 20-micron LPD carbon, 5-micron carbon

The starting point for all Cloudtap® systems, offering affordable filtration for chlorine, VOCs, sediments, and other unwanted impurities. All 2-stage systems come with the Fundamental sediment and low-pressure-drop (LPD) carbon cartridges, while 3-stage systems add a custom finishing filter (like this pack's 5-micron coconut carbon block).

\$140.00 RRP (FP000) \$240.00 RRP (FP001)

FP002

Mains Anti-Lead Pack

5-micron poly spun sediment, 20-micron LPD carbon, 0.5-micron composite carbon

A more advanced set for three-stage systems, using an ultra-fine composite carbon block constructed specifically for heavy metals like lead, mercury, and cadmium. Australia's aging water infrastructure and mineral-rich landscape make dedicated heavy metal protection a popular upgrade, and the 0.5-micron pores filter more thoroughly than the standard Mains Carbon Pack.

\$310.00 RRP

FP003

Mains Catalytic Pack

5-micron poly spun sediment, 20-micron LPD carbon, 0.5-micron catalytic carbon

In some regions where water travels long distances between treatment plants and households, providers use a stronger disinfectant compound called chloramine. Standard carbon filters can't make a dent in chloramine levels - you'll need one of these dedicated 0.5-micron catalytic carbon packs.

\$330.00 RRP

53 Edward Street, Osborne Park WA 6017

FP004

Mains Scaleblock Pack

5-micron poly spun sediment, Scaleblock softening cartridge,

5-micron carbon

In addition to the basic sediment and finishing filters, this system comes with a premium Scaleblock softening cartridge. Hard water is a headache for millions of Australians, but this cartridge conditions every drop of water coming into your home to significantly reduce limescale and mineral stains (while also filtering out chlorine and heavy metals).

\$539.00 RRP

FP005

Mains Scale & Anti-Lead Pack

5-micron poly spun sediment, Scaleblock softening cartridge,

0.5-micron composite carbon

For the ultimate anti-metal filtration system, this pack combines the softening and lead-absorbing prowess of the Scaleblock cartridge with the thorough protection of our ultra-fine composite carbon finishing filter. Safeguard your home and health while enjoying the sweet, non-swimming-pool taste of Cloudtap® water.

\$594.00 RRP

FP006

Mains Scale & Catalytic Pack

5-micron poly spun sediment, Scaleblock softening cartridge,

0.5-micron catalytic carbon

This pack is tailored specifically for people whose water is both chloraminated and high in hardness. Configurations like this are a little niche, but there's no one-size-fits-all solution when it comes to Aussie water; every household has different needs, conditions, and priorities. If you're in the cross-section of limescale and chloramine headaches, this set deals with both.

FP007

Tank Carbon Pack

5-micron pleated sediment, 20-micron LPD carbon, 5-micron carbon

If your house is connected to a rainwater tank rather than town water, your filtration needs will be very different—but don't worry, we've still got you covered. Our tank water packs replace the spun sediment filters with a washable, high-capacity pleated polypropylene cartridge. This pack provides the same 5-micron filtration as the Mains Carbon set, but it can handle much larger, grittier contaminants.

\$265.00 RRP

FP008

Tank Anti-Lead Pack

5-micron pleated sediment, 20-micron LPD carbon, 0.5-micron composite carbon

This is the perfect set for properties with rainwater tanks in (or downwind of) industrial/mining regions. The pleated sediment filter and LPD carbon cartridge deal with gutter gunk and improve the taste and odour of your water, but the 0.5-micron composite carbon filter provides additional protection against airborne pollutants and heavy metals that might end up in your tanks.

\$335.00 RRP

FP009

Tank Antibacterial Pack

5-micron pleated sediment, 20-micron LPD carbon, 0.5-micron silver-impregnated carbon

A long-life filter pack designed for rural properties with non-chlorinated water supplies. The bacteriostatic silvered carbon finishing filter prevents microbial fouling inside the cartridge.

NOTE: The silvered carbon prevents bacteria forming inside the cartridge, but the filters WILL NOT kill bacteria already in the water. DO NOT use Cloudtap® systems with water that is microbiologically unsafe or of unknown origin/quality.

\$310.00 RRP
