Scaleclear is Cludtap's new set-and-forget solution for limescale.

This small, sleek unit changes how calcium behaves in your pipes and appliances, neutralising hard water without stripping healthy minerals away or replacing them with sodium. With no filters to change or moving pieces to maintain, Scaleclear provides up to 20 years of hands-off water conditioning, either as a standalone unit or alongside a whole-home filtration system.

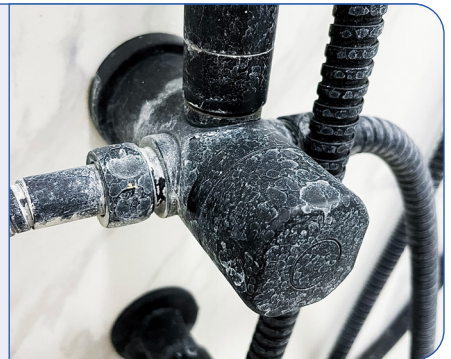

Benefits of Scaleclear

Bathroom

- ✓ Clearer shower screens
- ✓ Less scale/crust on shower heads
- ✓ Easier cleaning for tiles & counters

Kitchen

- ✓ Fewer scale spots on washed glasses
- ✓ Longer-lasting kettles and coffee machines
- ✓ Reduced risk of legionella

Plumbing

- ✓ Improved efficiency & lifespan for hot water systems
- ✓ Fewer clogged pipes and mineral deposits
- ✓ Protection for all appliances throughout the home

Salt Science

Scaleclear doesn't add or remove anything from your water—
it just teaches what's already there how to behave:

01.

Water flows over the spiral core, generating a charge from its dissimilar metals.

02.

The spiral agitates the water, producing CO₂ bubbles and slightly altering pH along its surface.

03.

Rather than allowing calcium carbonate to form scale on plumbing and appliances, the process converts it into microscopic crystals that remain suspended in the water and are carried away with the flow.

04.

Instead of turning into a clinging crust of calcite when the water heats up or dries out, the restructured crystals leave only loose aragonite particles.

High-flow or low-flow?

1. Test the flow rate from any taps or showers are likely to have running at the same time (typically 1-2 taps and a shower).
2. Count how long it takes to fill a container/bucket.

**(Container size / seconds to fill) x 60 =
flow rate in L/min**

3. Add these rates together.
4. If the total is above 30, go with High-flow.

DISCLAIMER: Most homes will get the best results from a Low-flow model. While the minimum rated flow is 25L/min, you should only switch to High-flow if your everyday water usage consistently requires 30L/min or more (running multiple showers and water-using appliances at the same time).

Scaleclear vs traditional softeners

	 Maintenance	 Cost	 Performance	 Sustainability	 Convenience	 Health	 Warranty
Salt softeners	Regular salt refills and servicing	\$2-6K initial purchase plus ongoing refill/service costs	Capacity and flow rate claims based on 100mg/L hardness	Requires constant power, produces concentrated brine waste	Larger footprint, must be installed near a power point	Strips healthy minerals, increases sodium	1-10 years depending on the supplier
Scaleclear	Zero maintenance for up to 20 years	\$599 one-time purchase	Up to 1300mg/L hardness	Zero waste, zero electricity, fully recyclable at end of life	Small footprint, easy installation (standalone or as part of a filtration system)	Retains healthy Mg and CaCO ₃ content, preserves alkalinity	10 years, always
Resin cartridges	Need replacing every few months	Multiple purchases per year, often part of an expensive multi-stage filtration system	Typically up to 120-150mg/L hardness depending on cartridge size	Cartridges expire rapidly and go straight to landfill	Requires pre- and post-filtration	Strips healthy minerals, increases sodium	Consumable cartridges typically aren't covered by product warranties

*Terms and conditions: Free installation promotion applies to any Scaleclear High-flow or Low-flow unit purchased alongside a Cloudtap Essential or Design series whole-home filtration system. No discount code or form submission is required; simply select "No installation" when adding the conditioner to your cart. As long as there is a whole-home system with installation included in your cart at checkout, that single installation charge will cover the Scaleclear conditioner. 12-month money back guarantee refunds the cost of the product only.
